Real Estate Backend - Project URLs & Reference

🌐 Production URLs

Main Application

```
https://real-estate-backend-beta-murex.vercel.app
```

API Endpoints

Manual Sync Endpoints (Testing/Debugging)

```
# Test IDX sync (small batch)
https://real-estate-backend-beta-murex.vercel.app/api/manual-sync?type=idx&mode=test

# Test VOW sync (small batch)
https://real-estate-backend-beta-murex.vercel.app/api/manual-sync?type=vow&mode=test

# Test both syncs
https://real-estate-backend-beta-murex.vercel.app/api/manual-sync?type=both

# Full IDX incremental sync
https://real-estate-backend-beta-murex.vercel.app/api/manual-sync?type=idx&mode=incremental

# Full VOW sync
https://real-estate-backend-beta-murex.vercel.app/api/manual-sync?type=vow
```

Cron Job Endpoints (Auto-triggered)

```
# IDX incremental sync (every 2 hours at :00)
https://real-estate-backend-beta-murex.vercel.app/api/sync-idx

# VOW full sync (every 2 hours at :30)
https://real-estate-backend-beta-murex.vercel.app/api/sync-vow
```

Other API Endpoints

```
# Health check
https://real-estate-backend-beta-murex.vercel.app/api/health

# Index/status
https://real-estate-backend-beta-murex.vercel.app/api/index

# Sync status
https://real-estate-backend-beta-murex.vercel.app/api/sync-status
```

🔧 Management Dashboards

Vercel Project Management

```
# Main project dashboard
https://vercel.com/savis-projects-ee27f902/real-estate-backend

# Environment variables
https://vercel.com/savis-projects-ee27f902/real-estate-backend/settings/environment-variables

# Functions & logs
https://vercel.com/savis-projects-ee27f902/real-estate-backend/functions

# Deployments
https://vercel.com/savis-projects-ee27f902/real-estate-backend/deployments

# Settings
https://vercel.com/savis-projects-ee27f902/real-estate-backend/settings
```

Supabase Database Management

```
# Main dashboard
https://supabase.com/dashboard/project/mkzlwzgierepbwnkzrsu

# Table editor
https://supabase.com/dashboard/project/mkzlwzgierepbwnkzrsu/editor

# SQL editor
https://supabase.com/dashboard/project/mkzlwzgierepbwnkzrsu/sql
```

⏰ Cron Schedule

Automatic Sync Times

- **IDX Incremental Sync**: Every 2 hours at :00 minutes (12:00, 2:00, 4:00, 6:00, etc.)
- **VOW Full Sync**: Every 2 hours at :30 minutes (12:30, 2:30, 4:30, 6:30, etc.)

🧪 Quick Test Commands

cURL Commands

```bash
# Test IDX sync (small batch)
curl "https://real-estate-backend-beta-murex.vercel.app/api/manual-sync?type=idx&mode=test"

# Test VOW sync (small batch)
curl "https://real-estate-backend-beta-murex.vercel.app/api/manual-sync?type=vow&mode=test"

# Full IDX incremental sync
curl "https://real-estate-backend-beta-murex.vercel.app/api/manual-sync?type=idx&mode=incremental"

# Full VOW sync
curl "https://real-estate-backend-beta-murex.vercel.app/api/manual-sync?type=vow"

# Test both syncs
curl "https://real-estate-backend-beta-murex.vercel.app/api/manual-sync?type=both"
```

🔑 Environment Variables

Required in Vercel

```
CRON_SECRET=sk_cron_b8f7e6d5c4a392817465019283746 5af82b9c1d0e3f4a5b6c7d8e9f0
SUPABASE_URL=https://mkzlwzgierepbwnkzrsu.supabase.co
SUPABASE_KEY=[your-supabase-anon-key]
IDX_URL=[your-idx-odata-url]
IDX_TOKEN=[your-idx-token]
VOW_URL=[your-vow-odata-url]
VOW_TOKEN=[your-vow-token]
FREEHOLD_URL=[your-freehold-url]
CONDO_URL=[your-condo-url]
LEASE_URL=[your-lease-url]
OPENHOUSE_URL=[your-openhouse-url]
MEDIA_URL=[your-media-url]
ROOMS_URL=[your-rooms-url]
```

📊 Database Tables

Supabase Tables

- `common_fields` - Main property listings
- `residential_freehold` - Freehold property details
- `residential_condo` - Condo property details
- `residential_lease` - Lease property details
- `property_openhouse` - Open house information
- `property_media` - Property images/media
- `property_rooms` - Room details
- `sync_state` - Tracks last sync timestamps

🚀 Deployment Commands

Local Development

```bash
# Test environment variables
node test-env-local.js

# Run sync locally (test mode)
node syncListingsIdx.js --test
node syncListingsVow.js --test

# Run incremental sync locally
node syncListingsIdx.js --incremental
```

Vercel Deployment

```bash
```

```
# Deploy to production
vercel --prod

# Check deployment status
vercel ls

# View logs
vercel logs
```

📝 Notes

- Cron jobs run automatically - no manual intervention needed
- Use manual sync endpoints for testing and debugging
- Check Vercel Functions logs for sync status and errors
- Incremental sync only fetches records modified since last successful sync
- VOW sync runs full sync every time (historical data changes less frequently)
- All sync operations include retry logic and error handling

🆘 Troubleshooting

If syncs fail:

1. Check Vercel function logs
2. Verify environment variables are set
3. Test manual sync endpoints
4. Check Supabase database connectivity
5. Verify IDX/VOW API credentials and URLs

Quick health check:

```
https://real-estate-backend-beta-murex.vercel.app/api/health
```
